## *Residential* LIGHTING FIXTURES

# CHASE RESIDENTIAL LIGHTING FIXTURES

IN this catalog are illustrated the complete line of Chase residential lighting fixtures. The line comprises a wide range, both in style and application. The latest trend in the development of lighting embodies scientific principles. There are, however, many fixtures designed for beauty and charm, to add to the decoration and attractiveness of each room.

These fixtures are representative of the name "Chase," which for generations has stood for quality and workmanship. Only brass or copper metal is used, because only on brass or copper can beautiful and permanent finishes be produced.

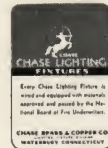

You may feel confident in the use of Chase fixtures, for they are the product of our own designers, engineers and mechanics, whose knowledge of lighting is backed by many years of experience.

For your protection, practically every Chase fixture bears the label of approval of the National Board of Fire Underwriters.

Despite the reputation and quality of Chase fixtures, they are inexpensive. See them at the Chase dealer's showroom in your city. Compare the quality and style.

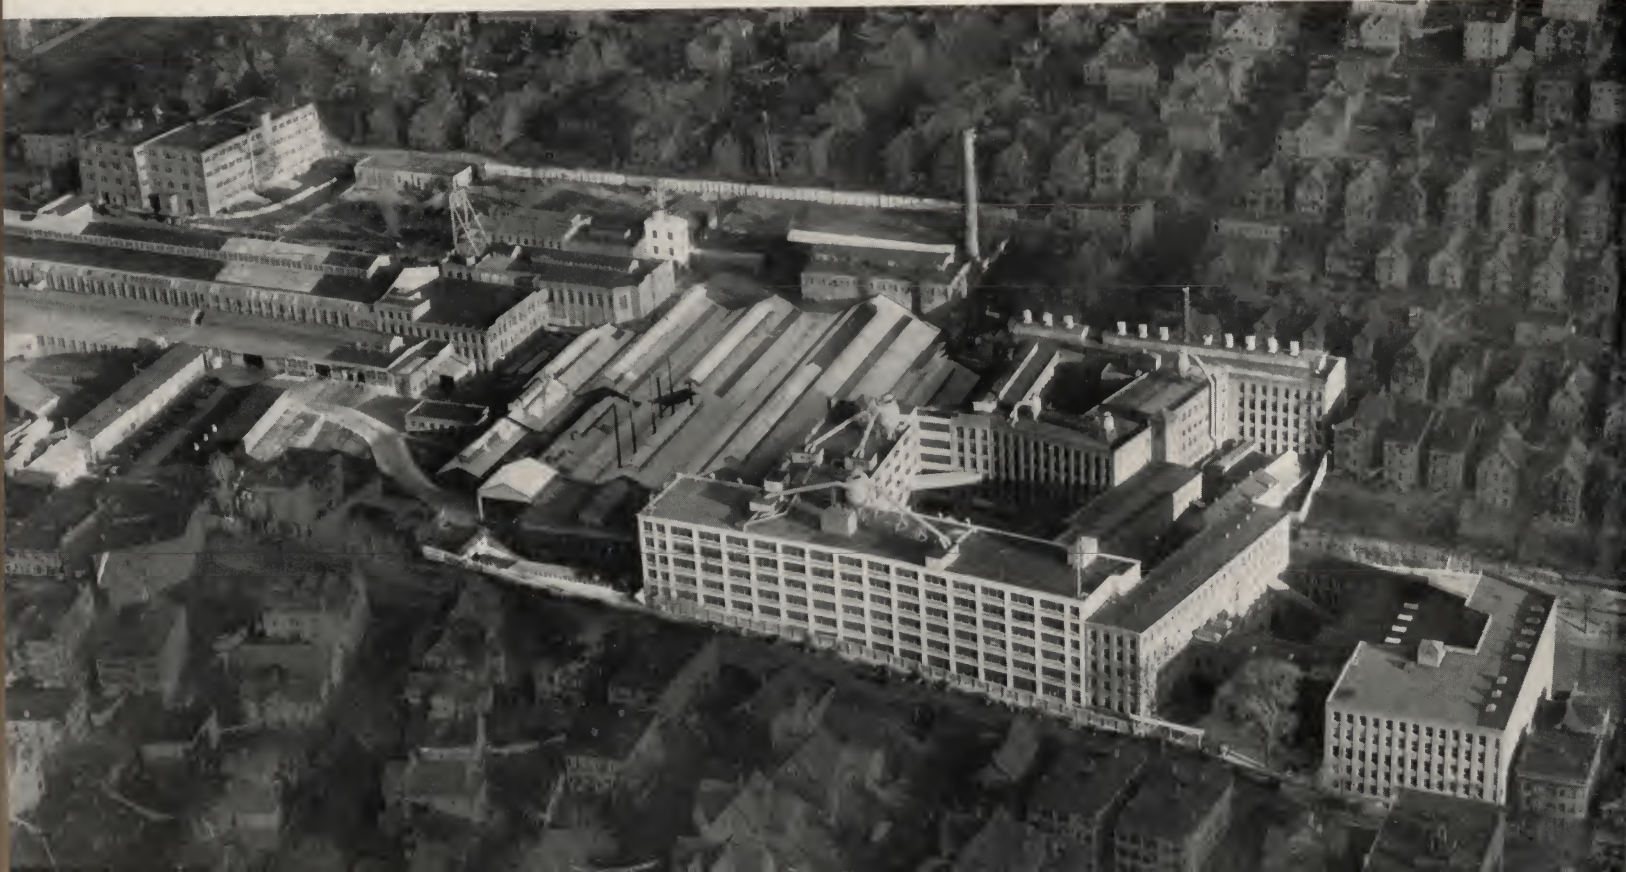

If you are unable to locate a Chase dealer in your city, your own electrical dealer can secure Chase fixtures for you. If you have difficulty, write to us for further information.

Insist on Chase lighting fixtures when you buy.  
Accept no substitutes.  
This tag identifies Chase fixtures.

Copyrighted 1938,  
Chase Brass & Copper Co., Incorporated

The Chase Rolling Mills and Manufacturing Plant  
in Waterbury, Conn. where Chase Fixtures are made.

**Poor Lighting** — Excessive glare and harsh shadows as shown in this room, is a strain on the eyes of these children doing their school work.

**Good Lighting** — Here's the same room lighted with a Chase "Even-Glow" fixture. No glare, no harmful eye irritating effects.

## SCIENTIFIC LIGHTING

### with CHASE "EVEN-GLOW"\* FIXTURES

Until very recently, lighting fixtures in the home were considered almost exclusively from a decorative standpoint.

The constantly increasing demand for more light resulted in the manufacture of larger bulbs. But the direct glare of the larger bulbs caused a strain on the eyes, and this strain contributed to nervousness and eye fatigue.

#### Light up Rooms Evenly

As a result of scientific study, we know now that with properly designed fixtures we can get more light and get it without glare. The glare from the bulb can be eliminated, and we can get a pleasant uniform light that will give more comfort and ease to the eyes. This is what scientific lighting means today.

#### Eliminate Glare

Chase "Even-Glow" fixtures were developed to give ample, well diffused light with the use of

large plastic reflectors, which hide the brilliant bulb. At the same time, these reflectors direct the light to the ceiling, where it is then reflected down uniformly throughout the room. Enough light is permitted to filter through the plastic bowl to eliminate any dark areas beneath the fixture. This new scientific lighting protects the eyes and gives a comfortable feeling because of the even distribution of "warm" light throughout the room.

#### Give 50% More Light

Another advantage of Chase "Even-Glow" lighting fixtures is the fact that in most cases, they use a single, large bulb, 100 or 150 or 200 watts. With the use of such a bulb, we are able to get approximately 50% more light output than with a number of smaller bulbs. And we obtain more light with no more current consumption.

## CHASE LIGHTING FIXTURES

*Suitable for Early American, Colonial, Early English, Federal,  
Georgian and Classic Modern Interiors*

On the following pages we show Chase Fixtures in the various period styles listed above. While the inspiration for design comes from the different historic periods of decoration still this characteristic styling has been tempered to blend into the American home of today.

You will find for example, that practically all the Federal and Georgian fixtures will be equally at home in houses of Colonial design, while a Colonial fixture, although it may be founded in Early American decoration

will look absolutely in keeping in an apartment of the Federal period.

In other words, the design of the fixture may originate from Colonial or Empire decoration, but the use of the fixture is distinctly not limited to "period houses".

Notice too the finishes of the fixtures. They are chosen as most suitable to blend harmoniously with the design. For example, provincial type fixtures are purposely made in a weathered brass finish to blend with knotty pine and plaster walls.

## No. 1584

Five-light ceiling fixture. Spread  $18\frac{1}{2}$ ". Length 36". Frosted glass chimneys and plastic reflectors, crystal bubble glass stem. Takes 40 watt bulbs. Finish: Weathered Brass.
